

Apullma conveyor belt wagon

Mobile conveyor system for discharging bulk goods

Our remote controlled conveyor belt wagon for the discharging of bulk goods from railway trucks makes the building of costly bulk bunkers, as well as shunting the complete train exactly into position unnecessary. The mobile conveyor belt wagon, for emptying trucks, is flexible in the longitudinal and latitudinal directions as well as being adaptable to the height of the discharging ports on different trucks.

Benefits at a glance

- Trucks do not have to be exactly positioned
- Flexible adjustment ability in longitudinal and latitudinal, as well as the height
- Intuitive and nomadic radio controlled steering
- High manoeuvrability through difficult terrain with 140° adjustable wheels
- Flexible energy supply from power network or diesel generator
