

Apullma elevators and vertical conveyors

For LCL and bulk

To overcome the difference in altitude for the transportation of LCL and bulk materials, Apullma offers an extensive range of individual vertical and articulated conveyors as well as elevators. They are distinguishable by the flexible design, as well as the moveable individual solutions in view of the integration of existing conveyors. Apullma offers simple elevators, elevators for steep elevations with matching belt edging to elevators that can transport material at 90 degrees. Swan Neck designs and Z-shaped variants are available to extend the delivery head for flexible access.

Benefits at a glance

- Specific pitch angle application and belt routes
- Customised belts from own production e.g. Profile, Grip or Pimple Belts; with Side Walls and Crosscuts
- Powder coated steel construction, also optional from non rust and hygienic stainless steel
- Optional inclusive filling and dispensing hopper
- Optional, from the same source, a control logic and demand drive.
