

Apullma Presorting and Picking Table

Customised layouts for optimal use

For optimal pre-cleaning and sorting of, for example, Root crops, such as potatoes, Apullma offers its automatic pre-sorter and picking table in customer friendly designs in terms of width, length and placement of the rollers. Sorting stages, for Trade Classifications, can be achieved by modifying the number and spacing of the grading rollers.

Benefits at a glance

- Automatic presorting and desanding
- Individually adjustable conveyor speeds
- Individual lay out for the size to be sorted
- Robust and durable grading rollers
- Available in rust free stainless steel
- Integrated before and after conveying processes to customer specifications as an optional
